KOMODO NATIONAL PARK

DIVEKOMODO

KOMODO NATIONAL PARK

Since it was established 1980, the park has gained many impressive titles including UNESCO World Heritage site, UNESCO Man & Nature Biosphere site and one of the New 7 Wonders of Nature.

The park lays 20km West from Labuan Bajo and it spans over 1733 km². Inside the boundaries of the park are 100 islands including the famous the islands of Komodo, Rinca and Padar. There are four permanent settlement of Bajo communities inside the park. The topography of this volcanic area is diversely spectacular both above and below the surface.

Each site here is unique in terms of eco-system, topography and the ways the currents flow. Our sites includes protected bays, drift, pinnacles, walls, swim-throughs, macro and Manta "cleaning stations".

DIVEKOMODO

SEASONS

Komodo is one of the few places in the world where it is possible to dive all year round! The official rainy season is between mid-Dec to mid-Mar, and although afternoon showers are fairly common in this period, we can also experience many days of beautiful calm weather. In Jan-Feb we have a higher risk of strong winds making the liveaboard a safer bet as it can reach more protected areas.

	<u>Weather</u>	<u>Best dive area</u>
Jan	Risk of NW wind	South, Padar (Central usually accessible)
Feb	Risk of NW wind	South, Padar (Central usually accessible)
Mar	Some risk of NW wind	Everywhere
Apr	Great Weather	Everywhere
May	Great Weather	Everywhere
Jun	Some risk of SE wind	Central, North
Jul	Risk of SE wind	Central, North
Aug	Risk of SE wind	Central, North
Sep	Great weather	Everywhere
Oct	Great weather	Everywhere
Nov	Great weather	Everywhere
Dec	Risk of NW wind	Central, South, sometimes North

DIVEKOMODO

MARINE LIFE

The area is part of the Coral Triangle which means that the bio-diversity for fish, invertebrates and corals are among the highest in the world! We have a massive range of both pelagic and reef fish that we encounter daily including Giant Trevally, schools of surgeon fish, sweetlips, snappers and Giant Morays.

We frequently see megafauna such as sharks, turtles, mantas, Napoleon Wrasse and eaglerays. We often have dolphins following our dive boat and on occasion we encounter them during the dive. Sometimes we also lucky to meet with Dugongs, whales, Whaleshark and huge schools of Cownose rays.

The macro life is also incredible and includes nudibranchs, ghost pipe fishes, frogfish, pygmy seahorses, octopus, flamboyant cuttlefish, sea apples and much more.

DIVEKOMODO

CURRENTS

The area is famous for strong currents but they will vary throughout the month. The closer we are to both full moon and new moon the stronger the currents tend to be. Around quarter moon phase the currents are mild.

The currents also vary between the sites since some are more protected. We are used to both beginners and experienced divers and will choose sites and dive plans accordingly. Please contact us if you would like advice on when it is best for you to dive.

Experienced divers

Strong currents offer exciting diving! All our guides have extensive experience of the sites and currents in Komodo and will know the best entry point and when to jump in.

Non experienced divers

For those not yet certified, have very little experience or just prefers less currents, then the best time for them to dive is a few days before and after quarter moon phases when the currents are less strong and more dive sites are suitable. If the guests are only able to come when we expect strong currents then please contact us to discuss.
